Heart Disease Facts

- Heart disease is the leading cause of death for both men and women. More than half of the deaths due to heart disease in 2009 were in men.¹

- About 610,000 Americans die from heart disease each year—that’s 1 in every 4 deaths.¹

- Coronary heart disease is the most common type of heart disease, killing more than 370,000 people annually.¹
• In the United States, someone has a heart attack every 43 seconds. Each minute, someone in the United States dies from a heart disease-related event. 

• Heart disease is the leading cause of death for people of most racial/ethnic groups in the United States, including African Americans, Hispanics, and whites. For Asian Americans or Pacific Islanders and American Indians or Alaska Natives, heart disease is second only to cancer.

• Coronary heart disease alone costs the United States $108.9 billion each year. This total includes the cost of health care services, medications, and lost productivity.

Risk Factors

High blood pressure, high LDL cholesterol, and smoking are key heart disease risk factors for heart disease. About half of Americans (49%) have at least one of these three risk factors.

Several other medical conditions and lifestyle choices can also put people at a higher risk for heart disease, including:

• Diabetes
• Overweight and obesity
• Poor diet
• Physical inactivity
• Excessive alcohol use

CDC’s Public Health Efforts

Million Hearts®
Million Hearts® is a national, public-private initiative of the Department of Health and Human Services to prevent 1 million heart attacks and strokes by 2017. Co-led by CDC and the Centers for Medicare & Medicaid Services, the initiative brings together communities, health care professionals, health systems, nonprofit organizations, federal agencies, and private-sector partners to improve care and empower Americans to make heart-healthy choices.

State Public Health Actions to Prevent and Control Diabetes, Heart Disease, Obesity and Associated Risk Factors and Promote School Health
Funded by the Centers for Disease Control and Prevention (CDC), State Public Health Actions is a national program that provides a base level of funding to all 50 states and DC to focus on underlying strategies that address all of these diseases.

WISEWOMAN
CDC funds 22 WISEWOMAN projects in 19 states and two tribal organizations. WISEWOMAN helps women with little or no health insurance reduce their risk for heart disease, stroke, and other chronic diseases. The program assists women age 40 to 64 in improving their diet, physical activity, and other behaviors. WISEWOMAN also provides cholesterol tests and other screening.
